DETAILED ACTION

Response to Arguments

1. Applicant's arguments filed 1/29/04 have been fully considered but they are not persuasive. Applicant argues that Chapin does not disclose a coating composition as defined by newly amended claim 1 having a block copolymer comprising at least one hard block and one soft block and at least one reactive monomer comprising a multi-functional acrylate wherein said hard block has a Tg greater than the Tg of the soft block.

It is respectfully noted that Chapin discloses in column 8, lines 66-68 a soft block Tg of negative 40 degrees Celsius and in column 10, lines 43-46 a hard block Tg of 40 degrees Celsius. Although Chapin does not specifically disclose the materials as amended, Chapin discloses the thermal and physical characteristics of materials that would be one of those claimed.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-3, 6-10, 11-26, 29, 31-35, 37-39, and 42-48 are rejected under 35 U.S.C. 103(a) as being unpatentable over United States Patent Number 4,962,992 to Chapin et al.

Chapin et al. discloses a curable coating composition that comprises a block copolymer comprising at least one hard block and one soft block, wherein said hard block has a Tg greater than that of the soft block (Column 8, lines 66-68 and Column 10, lines 43-46); and at least one

Art Unit: 2874

reactive monomer that is UV cured and a coating layer with an adhesion promoter, but fails to explicitly state the chemical properties of the components.

Although Chapin et al. does not specifically state the materials claimed, its teachings encompass all of those materials.

Therefore one skilled in the art at the time the invention was made would have been able to recognize that Chapin et al. obviously meets the limitations due to the breadth of its teachings. That is, since Chapin et al. isn't limited to any specific materials, it covers all materials which have the claimed hard block/soft block relationship.

As to claim 2, the hard block is made of thermoplastics (claim 1).

As to claim 3, the soft block is an elastomeric soft block (Column 8, lines 29-30).

As to claims 14 and 32, it would be inherent that a UV curable compound has a photoinitiator.

As to claim 16, an adhesion promoter is used (Column 14, line 66).

As to claim 33, figure 2 shows a primary coating on an optical fiber.

Conclusion

4. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period

Art Unit: 2874

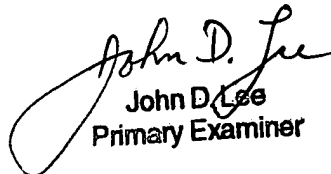

will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
